📄 PROFILE

My career has been a mix of deep-dive research and hands-on building. From analyzing telecom data at the University of Helsinki to architecting enterprise-grade APIs, I have mainly worked on building features and improving existing systems with a focus on customer needs. I've worked on improving performance and security while modernizing applications like migrating to React and building APIs, along with experience in AWS, Docker, Kubernetes, CI/CD pipelines, and full-stack development using Angular and Ionic.

🧠 SKILLS

Programming Languages

Java, Python, C++, Dart, Frontend JS framework (React & Angular)

Management Tools

Atlassian (Bitbucket, Confluence, Jira), Trello

DBMS

PostgreSQL & MySQL

Organizational Skills

Leadership and Management, Event Organization, Communication

Other Skills

GIT version control, Bash script, Honeycomb

🎓 EDUCATION

University of Helsinki, *Master's Programme in Computer Science*

09.2023 – 06.2025 | Helsinki

Thesis: Evaluating the Impact of Adaptive Normalization Techniques on Anomaly Detection Models

Universiti Teknologi Malaysia (UTM), *Bachelor of Computer Science (Software Engineering)*

09.2018 – 08.2022 | Johor Bahru

Thesis: Data Analytics For Predicting COVID-19 Cases Using Supervised Regression Techniques

📁 EMPLOYMENT HISTORY

Associate Software Engineer, *Ritchie Bros.*

06.2025 – Present | Helsinki, Finland

Building backend systems and features in the frontend within our digital payments platform. Also contributing to migrate existing internal customer support platform from Retool to **React**, adding new features, and improving existing internal tools. Key contributions:

- Built and maintained a Reallocation & Refund system handling complex multi payment workflows, approvals, and audit logging using **Java and Spring Boot**
- Improved system security and reliability by resolving vulnerabilities using Snyk and upgrading to a major Spring Boot version to address security and compatibility issues.
- Working across multiple **microservices**, handling inter-service communication, writing unit tests, and using contract testing to ensure reliable API interactions.
- Developed scalable RESTful APIs for tax adjustments and invoice management
- Optimized performance by shifting heavy data processing to the backend and implementing efficient pagination and search
- Implemented feature flagging (**LaunchDarkly**) and business rule automation (Drools) for controlled and flexible releases
- Contributed to frontend modernization by migrating applications from Retool to React, starting with an event registration app
- Added new features and redesigned existing internal tools, including the Account Support app, within Retool
- Utilized **Docker, Kubernetes, Honeycomb** traces and **CircleCI** pipelines for efficient fixes and deployment
- Participated in monthly **on-call** rotation and provided production support during a high traffic auction event, ensuring system reliability

Research Assistant (Master's Thesis), *University of Helsinki*

01.2025 – 04.2025 | Helsinki

Following my internship, I worked on my Master's thesis focusing on adaptive data normalization methods. The research applied these methods to telecommunications and **IoT sensor datasets** to improve **anomaly detection**.

Research Group: Intelligent environmental monitoring and analytics

Group Link: <https://www.helsinki.fi/en/researchgroups/intelligent-environmental-monitoring-and-analytics> ↗

Research Assistant (Intern), *University of Helsinki*

05.2024 – 08.2024 | Helsinki

Assigned on a joint project with the **University of Helsinki and Nokia Bell Labs** (Network Systems and Security Research Lab, Network Operations department). My main task was to work with various normalization techniques and evaluate them, particularly in relation to telecommunication datasets.

Project: Data Efficiency Techniques for Mobile Networks Research

Group Link: <https://www.helsinki.fi/en/networks/6g-research> ↗

Software Developer (Freelance), *Wavelet Solutions Sdn. Bhd.*

03.2022 – 02.2023 | Subang Jaya

Worked on developing mobile apps and web console using Ionic and Angular respectively and using Java Spring Boot for back-end development. My job scopes were as follows:

- Modifying adminweb console (**Angular**) and mobile application (Ionic).
- Creating and consuming RESTful APIs.
- Working with JAVA and SpringBoot.
- Working with PostgreSQL database.
- **AWS** environment (EC2, Lambda).

LANGUAGES

English

Bengali

HONOURS & AWARDS

Dean's List

Achieved Dean's List Award in 4 semesters for achieving excellent academic result in bachelor studies. (Semester 1, Semester 4, Semester 5, and Semester 8).

- Continuous delivery and continuous integration.

Software Developer (Intern), *BigLedger Sdn. Bhd.*

08.2021 – 02.2022 | Subang Jaya

During my internship, I specialized in Java Spring Boot for backend development, gaining valuable experience in deploying applications on client servers through AWS cloud services. My other responsibilities were as follows:

- Developed **database migration scripts**.
- Acquired knowledge of unit testing and test case creation using Java.
- Integrated APIs using Spring Boot Framework.
- Utilized **Git** for version control.
- Engaged in project management using JIRA and CONFLUENCE.

★ EXTRA-CURRICULAR ACTIVITIES

Cloud Hero Hackathon 2022 at UTM

Organised by Digital Services Department (UTMDigital) and Google Malaysia. I have participated and won 2nd prize in my session.

Application Development Service at UTM

I, with my team-members, went to a school to help the students learn English in a more fun way using Mobile Application where we gathered feedback from the students and developed an English learning app.

Code on Weekend at UTM

Description: Workshop for learning Flutter. Achievement: Created a mobile application using Flutter
